

# UADC PoC Documentation

The documentation has been completely reorganized into five purpose-oriented documents. The former files **SETUP.md**, **TUTORIAL.md**, **DATA\_MODEL.md**, **SYNTAX\_BINDING.md**, and **SEMANTIC\_BINDING.md** have been replaced by the documents below.

| No. | Document                                                                  | Scope                                                                                                                                                                 | Main program                             |
|-----|---------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------|
| 1   | <a href="#">Environment Setup, Tests, Maintenance, and Tutorial</a>       | Environment setup, definition files, regression tests, maintenance, and an end-to-end exercise                                                                        | All programs                             |
| 2   | <a href="#">Structured CSV, LHM, Syntax Binding, and Semantic Binding</a> | Structured CSV as a 21st-century normalized table; LHM; XPath/selector syntax binding; <b>semantic_path</b> , selectors, <b>[n]</b> , and CSV-column semantic binding | <b>tools/</b> and binding tables         |
| 3   | <a href="#">Phase 1 UBL Syntax Binding</a>                                | Environment contract, conversion operations, and function-level processing of <b>syntax_binding.py</b>                                                                | <b>src/syntax_binding.py</b>             |
| 4   | <a href="#">Phase 2 ADS PSV Semantic Binding</a>                          | Environment contract, conversion operations, and function-level processing of <b>semantic_binding.py</b> ; ISO 21378 ADC CSV is also covered                          | <b>src/semantic_binding.py</b>           |
| 5   | <a href="#">Phase 2 ADS XBRL GL Syntax Binding</a>                        | Environment contract, conversion operations, binding-table interpretation, XPath/selector processing, and function-level processing                                   | <b>src/syntax_binding_ads_xbri_gl.py</b> |

## Recommended Reading Order

1. Start with Document 1 to configure and run the PoC.
2. Read Document 2 to understand the common data and binding model.
3. Use Documents 3–5 for implementation details of each conversion path.

The Japanese documentation under [ja/](#) uses exactly the same file structure and document boundaries.
